

AbiliTrax Continues To Roll Out “State-of-the-Art” Mobility Solutions...

By Jennifer Overfield, Public Relations Manager at AbiliTrax

Ford Transit EL Extra Long High Roof (U4X)

Scott Fenton, President and Co-Inventor of the AbiliTrax system states, "The AbiliTrax flooring and seating system is without question state-of-the-art in the special mobility flooring and seating... and our

latest patent pending innovation, the **“Shift N Step”** takes accessibility to another level for all passengers accessing the newer style vans, most specifically the newer Ford Transit series X2C Medium Length-Medium Roof, X2X Medium Length-High Roof and U4X Extra Long Length-High Roof models."

Scott continues, "Our new patent pending **“Shift N Step”** dual entry system allows paratransit and NEMT operators the ability to use OEM van chassis (such as the Ford Transit) and have a side-mounted 34" wide wheelchair lift installed...and when you want to shift the lift so ambulatory users can then access the side door entry position, the driver simply activates the **“Shift N Step”** system and the wheelchair lift gently glides rearward allowing for ambulatory access. A power door operator is an available option. Grab handles are also strategically located to assist ambulatory passengers to access the side door opening. With our new **“Shift N Step”** dual entry system, because it's a bolt on design, you no longer need to have your new van structurally modified at either the front door position or the side door location to provide ambulatory access, and because the van is not structurally modified means you minimize service and warranty issues. This all adds up to a state-of-the-art ADA compliant vehicle system that will significantly decrease the total cost of ownership, yet will allow total access."
